

Plant a Pollinator Patch!

Water Quality
is everyone's concern.

Garden for the good of the birds and bees.

A pollinator patch is smaller, usually urban, ecosystem made up of Minnesota native plants that will provide food and cover for birds, bees, and butterflies. By limiting the use of yard and garden chemicals, we can improve water quality and be part of the solution to bring back the dwindling populations of pollinators. [CLICK to LEARN MORE](#)
